

Did you know....

In Southern California, it costs more to produce electricity in the summer, when energy demand is at its peak, and less to produce electricity in the winter, during periods of lower demand. When you use energy wisely, you'll be saving money and the environment.

That's why the City of Adelanto and Southern California Edison (SCE) are partnering to encourage energy efficiency and conservation.

Using energy wisely in our everyday lives is a smart way to ensure our planet and its natural resources are protected. Simple changes to your daily routine on how and when you use electricity can make a difference.

For example, switch off unnecessary lights and at the end of the day turn off office equipment. Even using your washing machine, dryer or dishwasher before noon or after 6pm can help conserve energy when demand is at its highest.

Energy management is the first and best way to manage your energy use not only at home, but at work too. It can help create a brighter future for us all. By becoming more energy conscious, you'll help California conserve valuable energy resources now and well into the future.
