

Proper Tethering for Dogs

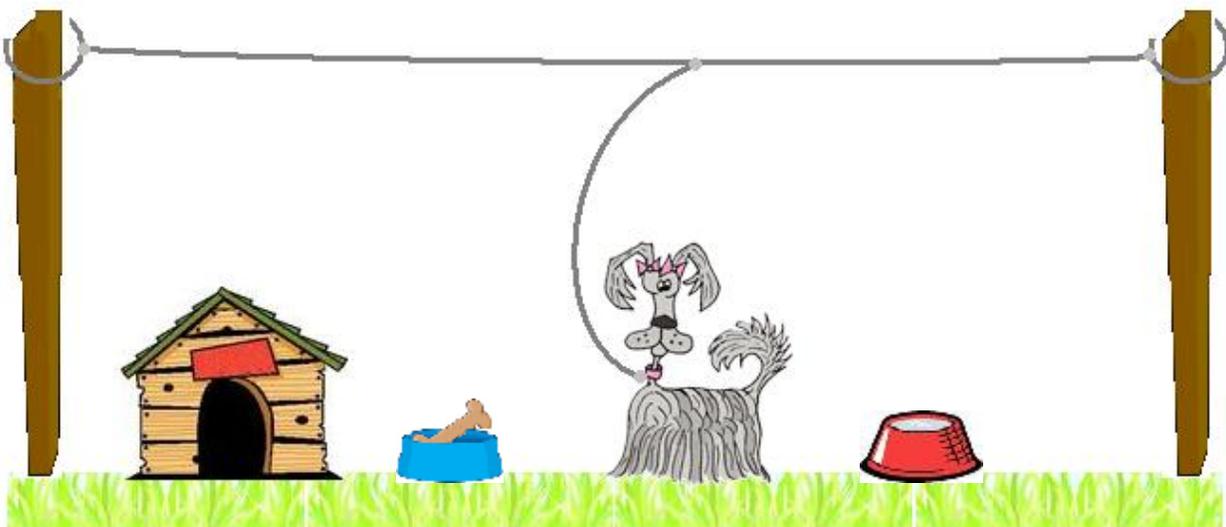

Example 1

In this picture, we see two (2) posts planted into the ground. A line is then attached to both posts. A second line is then attached at one end to the dog and the other end attached to the first line. The line attached to the dog should be long enough to allow the dog access to **food, water and shelter**.

Example 2

In this picture, we see two (2) posts planted into the ground. A line is then attached near the top of both posts. A second line is then attached at one end to the dog and the other end attached to the first line. The line attached to the dog should be long enough to allow the dog access to **food, water and shelter**.
